WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XIV.

NOVEMBER EDITION

1919.

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

SEASONABLE NOTES.

We are sending you, together with this issue of "WOOD'S CROP SPECIAL" our "POULTRY SPECIAL," giving information in regard to poultry raising and also about our poultry foods and supplies. Indications are that the poultry industry will be most profitable to our farmers everywhere, and every effort should be used to increase both the egg laying and chicken producing capacity of the farm. The continued high prices of meats and other foods gives promise that poultry will bring very attractive prices the coming winter, consequently every farmer should strive to have a heavy production of eggs during December and January at the time they are bringing good prices. We believe our "Poultry Special" will give you such information that will enable you to make your poultry a profitable business. We shall also be pleased to send upon request, a copy of our Fall Catalog, on pages 31 to 34 of which you will find more complete information in regard to poultry helps and appliances.

SEED WHEAT.

Seed Wheat can be very safely and satisfactorily sown throughout the month of November in this section and further South, and we urge our customers to have stocks on hand when weather conditions are favorable for seeding. When late seedings are made it is advisable to plant wheat thicker, at the rate of $1\frac{1}{2}$ bushels to 2 bushels to the acre, as it does not have the opportunity to stool out as well as earlier seedings. This particularly applies to Leap's Prolific and Fulcaster, whereas for the Stoner a bushel to $1\frac{1}{2}$ bushels is sufficient.

Where fertilizer has not been used on wheat this fall it is very much better not to fertilize now, but to apply the fertilizer as a top dressing early in the month of March sowing the fertilizer on the wheat and then running a harrow cross-wise over the wheat so as to slightly incorporate the fertilizer with the soil. If the fertilizer is applied in this way it will give much better results than using at this time. Fertilizer applied to wheat or other fall sown crops in the fall loses considerable of its strength by winter rains before the crop reaches the growing stage when it is ready to take up the fertilizer, whereas, when it is applied in the spring it is applied just at the time when the crop is ready to grow off and take up the fertilizer to the best advantage. Grasses and Clovers can also be sown in the spring to excellent advantage, at the time fertilizer is applied.

Leap's Prolific Wheat.

The Leap's Prolific Wheat which I got from you last fall did fine, and I will want more this fall. I believe it would pay to sow your wheat every year in place of sowing my own growing.—C. A. KIMEL, Forsyth Co., N. C., June 7, 1919.

SEED RYE

We are now approaching the season when winter cover crops should be taken into consideration, and we urge our customers to put in every available space of land in some good winter cover crop and conserving the crop producing qualities of the soil by preventing washing by winter rains. As it is too late in the season for sowing Crimson Clover, we know of no better cover crop than **Wood's Winter Rye**, which can be sown advantageously any time during the month of November.

As well as furnishing a most excellent winter cover crop it can be used for grazing through the winter and early spring, and also makes an early green food and most profitable grain crop. **Rye** sown as a cover crop should be turned under before the straw reaches maturity the following year. Can be plowed under whenever it is desirable to prepare for crops for next spring, and it will improve the land materially in this way for succeeding crops.

To farmers who desire to make a most satisfactory fall, winter and spring pasturage, **Wood's Grain Pasture Mixture** will probably yield more pasturage than anything else that can be put in now. It is composed of a mixture of the best standing varieties of Wheat, Winter Rye, Winter Barley and Turf Oats, together with Winter Vetches, mixed in proper proportions to give best results. We have received some very enthusiastic letters from our customers who have been sowing this mixture for years as to the large quantity of grazing which it gives.

Both **Perennial** or **English** and **Italian Rye Grass** have been used extensively in our Southern climates with most satisfactory results. These grasses are quick growing, very hardy, withstanding both cold and dry weather, and will make a beautiful green appearance all through the winter and spring months. Rye Grasses will give good results on most any character soil. Should be sown for lawns at the rate of 30 to 35 pounds to the acre, or for small lawns, 1 pound for every 350 square feet.

Sow **Wood's Evergreen Lawn Grass Seed** as early now as you can. Fall is much the best time for sowing. Sown now the seed comes up quickly and makes a beautiful green lawn all through the winter and spring and gets well rooted and well established so as to be enabled to stand hot and dry weather in the summertime, and the chances for a first-class, permanent lawn are very much better if sown at this time than at any other time during the year. You can also expect a weedless lawn if you sow seeds at this time. Even if weeds which are in the soil should happen to come up, the cold weather kills them out, while the grass thrives and fully occupies the ground so as to prevent the growth of weeds again in the spring. **Wood's Evergreen Lawn Grass** is the best lawn mixture for satisfactory all-the-year-round lawns.

T.W. Wood & Sons, Richmond, Va., Price-List of Field Seeds

When Sending Orders at Prices Named Here, Please Mention Crop Special No. 1182.

November 5, 1919.

United States Food Administration License No. G. 181.

Prices of Field Seeds are always subject to market fluctuations. We always fill all orders entrusted to us at lowest ruling prices on date order is received. If prices decline, we give our customers the benefit of it. If they advance, we charge the advance prices. In case customers desire to limit us to filling orders at prices quoted on any particular date, they will kindly so state in order, or mention date and number of "Wood's Crop Special," upon which the order is sent.

Terms on all Field Seeds, net cash. Customers who have no regular accounts with us will kindly remit the amount with their order or name business reference as customary before opening new accounts.
